Conduct- OS [my role as your growth generalist]

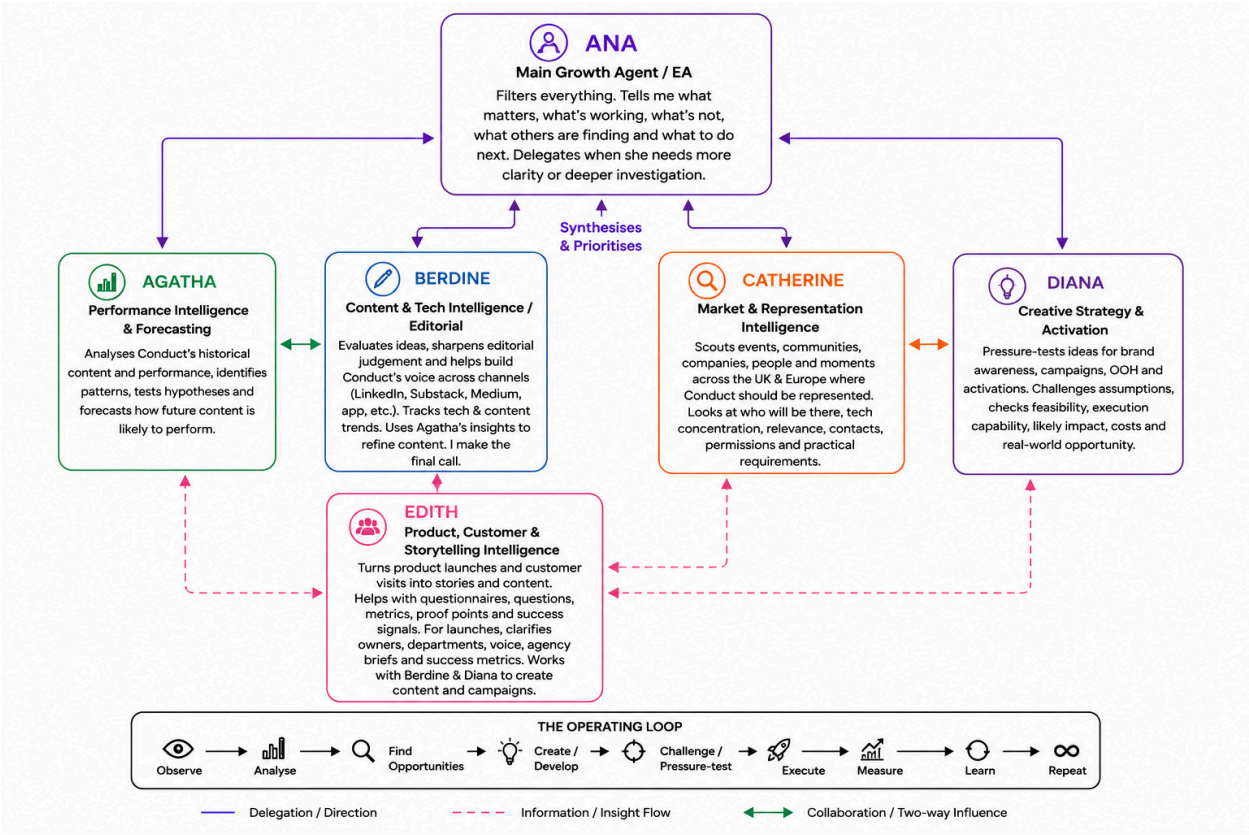

Conduct appears to have something much harder to manufacture than attention: a genuinely interesting product solving a difficult enterprise problem, strong customer credibility, and a story that becomes more compelling the deeper you go. The opportunity I see is turning that underlying value into significantly more traction, reach and recognition. So I did a small analysis of Conduct's LinkedIn posts from April through August 28, 2026, and this is what I found.Across 38 posts, Conduct generated 7,079 likes, 1,045 comments and 251 reposts -approximately 8,375 total interactions. That works out to an average of 186 likes, 27.5 comments and 6.6 reposts per post. I also tested the problem outside the existing Conduct audience: I showed Conduct to 10 people who weren't familiar with the company. On average, it took them five posts to understand what Conduct does. Here are my two cents, As your Growth Generalist, my North Star is simple: increase meaningful traction on Conduct's own content without relying on reposts I build a small system in a the last two days based on the public information available and turned it into my first 90 days-

Week 1- 2	I would deploy berdine and agatha to understand conduct's digital footprint and existing content domains while understand if there's any significant asset I can use. Berdine would map conduct's voice, recurring themes, technological trends and gaps while agatha understands which format generates meaningful engagement and patterns amongst the weakest performing posts. By week 2 I would have what is missing, and what we should stop doing immediately for example during two runs agatha suggested to kill/optimise for the new joining post, because they dont get much traction as a result the algorithm gets trained for lower engagement.
Week 3-4	I would try a series of small experiments. for example- corporate crime scenes about the absurdity and complexity of the enterprise systems with berdine helping with the editorial angle and agatha helping with hooks and performance forecast. Example 2- founder/conducts voice, based on what conduct learned or why it was formed, behind the scenes format or team culture (on average these posts performs well on conducts page which means people are curious) example 3- test linkedin video format to see if conduct is more memorable if someone from conduct explains it. By week 4 I will have an idea of which contents are consistently underperforming and thus killing it.
week 5-6	Taking conduct beyond linkedin, I would distribute conduct across 3 platforms, including substack and Medium. Berdine identifies what could travel away from medium, following which I aim to establish a schedule for posting- 1-2 Linkedin series, regular short form video, a clear editorial calender, a longer form channel. We move from intuition to clear metrics
week 7-8	I will consecutively deploy and build conduct's opportunity radar (where should conduct show up). Catherine will be my agent for this, who would scout linkedin, reddit, google, X to inform me about the events where potential clients/talents/partnerships could be. This could be hackathons (imperial AI hackathon) partnering with Open AI/Anthropic (2027), or Corgi. She would tell me why conduct should be there, who else is gonna be there, who to contact, deadlines etc. She is an active agent and triggers Ana who briefs me the next morning. Not every idea gets escalated she brings the idea I would filter if there's an overlap with conduct, if conduct could be distinctive, or what would be the leverage only then I escalate a proposal plan.

week 9-10	Turning ideas into campaigns is one of the most critical base and here's how I would run a successful campaign. Diana is my agent for creative strategy, If I want to do a SAP photobooth at the London Tech event 2027, she stress tests me. This is a much bigger event than any arbitary week, she tells me how much space, what could be the challenges during execution, estimated cost, how long should it run, how much traction to expect etc. she makes sure bad ideas doesn't happen.
Week 11-12	Probably my favourite bit of the growth loop, turning conduct's product and customers into growth assets. For example conduct is launching its product documentation capability so my question to edith won't just be "tell me how to brief the agency" Edith will help me identify the potential HERO stories from the product launch-"Freudenberg's journey from problem to solution" with 5 micro assets, one video format. She would make sure I have my eyes on the metrics to understand what's working vs whats breaking down. End of week I would run a small experiment to see if people understand conduct not just the engineers or enterprise, but everyone. I call it the blackbox experiment. I would film 3 people, an engineer, an enterprise candidate and someone completely separate from this space, give them conduct's material and 10 minutes and in the end ask them what they though about the product. Success will be them memorability, enquiry, interest and their questions.
week 13-14	Turning everything into the loop and building it into a repeatable system, not random 100 initiatives.

By the end of month 3 I will have clear metrics against day 1 baseline, with 2-3 proven content formats, a functioning opportunity pipeline, a product customer story telling system and a growth loop to show me what should stay and what should go.

Now that you have met all my agents, I can introduce you to the architectural loop that will keep me informed, up-to-date, and ready for anything comes at my desk-

References-

1) London Tech photo booth; WHATS YOUR SAP SCORE- I came up with this idea for Conduct around London Tech Week: a physical Conduct photo booth where someone gets a Polaroid and a completely ridiculous "SAP Score" not a real measurement, just Conduct making fun of the reality of working with massive, complicated SAP environments. You might get 21% and be told your SAP is being held together by thoughts and prayers, or 100% and get something like "there's a 100% chance we can get started on your systems within 48 hours." The point is to create something people actually remember and want to share, rather than another piece of branded content. Then I give the idea to Diana and ask her to **try to break it**. Is the audience right? Where should it actually happen? Does the format work? Is it funny enough to travel? What would it cost, what permissions would we need, how much footfall would we need, and is there a better way to execute it? I also started thinking about the second layer if someone takes that Polaroid, remembers Conduct, and then encounters the company again months later, could we ask, "Have you met Conduct before?" and eventually have that original Polaroid sitting on the office fridge if they join? I'm not asking Diana to invent the idea for me. **For this one she mentions its authentic to the problem, differentiates the brand, and creates a memorable brand recall with genuine engagement online with the recruitment layer which acts as a cultural signal and differentiation mechanism making this idea a "should move ahead".**

CONDUCT BLACK BOX EXPERIMENT

Understanding Conduct Through Fresh Eyes

The goal of this experiment is simple: find out if people who don't know Conduct can understand what we do, why it matters, and who it's for after experiencing our content and product.

THE HYPOTHESIS

If people who are unfamiliar with Conduct cannot explain what we do after experiencing our content and product, the problem may be the way we communicate our value, not just a lack of awareness.

WHO WE TEST

People with no prior familiarity with Conduct.

- Engineering / technical students
- Enterprise professionals
- People familiar with enterprise software but not Conduct

Mix of backgrounds. No prep. No briefing.

THE EXPERIMENT

1 BEFORE EXPOSURE

We ask one simple question:
"What do you think Conduct does?"
(Establishes the baseline.)

2 GIVE THEM ACCESS

We give them Conduct's website, LinkedIn content, product overview / demo and any public material.

They get 10 minutes to explore everything on their own. No guidance. No leading.

3 ASK THEM TO EXPLAIN IT BACK

After 10 minutes, we ask:

- What do you think Conduct does?
- What problem do you think it solves?
- Who do you think it's for?
- What part seems most useful?
- What part was confusing?
- What would make you want to learn more?
- What would you expect Conduct to build next?

4 FOLLOW UP LATER (24–48 HOURS)

We ask them again:
"What do you remember about Conduct?"
(Tests memorability.)

WHAT WE MEASURE

We score responses against a simple framework.

Category Recognition	Do they understand what kind of company / product Conduct is?
Problem Recognition	Can they identify the problem Conduct solves?
Customer Recognition	Do they understand who it is for?
Value Recognition	Can they explain why it matters?
Memorability	Can they remember Conduct afterwards?
Confusion	Where do they misunderstand it?
Curiosity	Do they want to know more?

HOW WE USE THE RESULTS

If people consistently misunderstand the same things, we don't just conclude "the audience doesn't get it." We feed the findings into Berdine.

Example: "Five people understood the product, but four couldn't explain the problem Conduct solves."

Berdine analyses our existing language and positioning:
Are we describing the product before establishing the problem?
Are we using jargon the audience doesn't care about?
Is our message too technical, too broad, or not credible?

Then we refine the language, adjust the messaging, and test again.

The loop: Black Box → Evidence → Berdine → Messaging Changes → Content → Test Again

SUCCESS METRIC

Can an outsider accurately explain Conduct?

If yes, we are communicating clearly. If not, the data tells us exactly what needs to change — and we fix it.

WHY THIS MATTERS

We can't build meaningful traction if people don't first understand what we do. This experiment removes assumptions and gives us real evidence on how Conduct is perceived, remembered and understood.

CONDUCT – CONTENT IDEAS

SHORT POSTS (LINKEDIN)

POST 01 – THE TREASURE

People have been digging for buried treasure for centuries.

Most give up. Some spend years. A few get lucky.

Enterprise companies do the same thing with their own systems.

Paying consultants millions to excavate what's already inside their software.

Months of digging. Occasionally finding something useful.

Turns out the treasure was always there,
It just needed the right tool.

48 hours. Yes, it's a promise.

POST 02 – THE IKEA MOMENT

Every enterprise software project eventually reaches the IKEA.

There are 47 pages of instructions.

Half the screws are missing.

Nobody remembers who threw away the box.

Everyone insists it's basically finished.

It isn't.

(There's a better way to build.)

CONDUCT ORIGINALS – MICRO POSTS

Exhibit A: 4,782 custom SAP objects. Zero documentation. Three consultants have entered. None have returned.

Exhibit B: This function hasn't been touched since 2008. Nobody knows what it does. Payroll depends on it.

Every enterprise has at least one server that's survived three CEOs.

If your only disaster recovery plan is Dave from Finance remembering how it works that's not actually a plan.

Every company has one SAP transaction nobody touches.

Not because it's broken. Because nobody wants to be the person who found out.

"We can't delete it.
Nobody knows what it does."

"The documentation is up to date."
(Written in 2014.)

"Can we just ask the guy who built it?"
He retired in 2017.

LONG POST FORMAT

(IN JP HASS'S VOICE)

I spent three years watching the world's largest companies make the same mistake.

They'd bring in consultants. Spend six months mapping their SAP systems. Burn through millions.

Produce a document already out of date by the time it was printed.

Then they'd do it again.

Not because they were stupid. Because the system had become genuinely unknowable.

Twenty years of patches and custom code had turned what was once clean into something no single human mind could hold all at once.

One CIO described it perfectly. He said his team was flying blind. That phrase stuck.

Flying blind costs 3 to 4% of enterprise revenue. Every year. Not on innovation. On maintenance.

We built something because we got tired of watching smart people spend careers managing complexity instead of creating value.

First time a customer used it, they understood their entire SAP estate in 48 hours.

Every dependency. Every line of custom logic.

48 hours. The consultant who quoted the same project said 14 months.

We're hiring.

If you've ever looked at a broken system and thought:
I could fix that — come find us.

London and NYC.

EDITH LAUNCH CHECKLIST

Process Documentation Capability — Freudenberg Collaboration

01 PRE-LAUNCH PREPARATION

PRODUCT CLARITY

- [ ] Exact product/capability name confirmed
- [ ] Launch date/announcement date confirmed
- [ ] Availability status (now vs. coming soon)
- [ ] Core functionality documented
- [ ] AI role/differentiation explained
- [ ] Customer use cases identified
- [ ] Competitive positioning clear
- [ ] Legal/compliance review complete

CUSTOMER PERMISSIONS

- [ ] Freudenberg willing to be named publicly
- [ ] Willing to participate in video/photography
- [ ] Willing to provide quotes
- [ ] Willing to share metrics/results
- [ ] Willing to do case study
- [ ] NDA/confidentiality boundaries clarified
- [ ] Approval process defined
- [ ] Timeline for customer approval understood

TEAM ALIGNMENT

- [ ] Product lead identified
- [ ] Conduct team members attending identified
- [ ] Freudenberg attendees & roles documented
- [ ] Photographer/videographer briefed
- [ ] Agency (if involved) briefed
- [ ] Content team (Birdine) looped in
- [ ] Approval chain clear

02 DURING WORKSHOP / COLLABORATION

PHOTOGRAPHY CAPTURE

SETUP SHOTS

- [ ] Workshop space (venue, setup, energy)
- [ ] Whiteboards/notes/thinking
- [ ] Materials/documents being discussed

PEOPLE SHOTS

- [ ] Freudenberg team (portraits w/ names/titles)
- [ ] Conduct team (portraits)
- [ ] Mixed group shots (collaboration)
- [ ] Close-ups of people engaged
- [ ] Reactions / moments of insight

INTERACTION SHOTS

- [ ] People discussing at table
- [ ] Someone explaining/presenting
- [ ] Listening moments
- [ ] Moments of agreement/insight
- [ ] Informal moments (breaks, chats)

DETAIL SHOTS

- [ ] Notebooks / sketches
- [ ] Whiteboards (problem/solution)
- [ ] Laptops / tools being used
- [ ] Visual representations of the problem

03 VIDEO & AUDIO CAPTURE

INTERVIEWS (WITH FREUDENBERG)

- [ ] What was the problem you were facing? (2–3 min)
- [ ] Why does this matter to your team? (2–3 min)
- [ ] What surprised you about Conduct's approaach? (2–3 min)
- [ ] What could this capability change for you? (2–3 min)
- [ ] Get names/titles on camera

INTERVIEWS (WITH CONDUCT)

- [ ] What did we learn from Freudenberg? (2–3 min)
- [ ] Why is this problem important? (2–3 min)
- [ ] How does this capability solve it? (2–3 min)

WORKSHOP FOOTAGE

- [ ] Opening / context-setting (5–10 min)
- [ ] Problem discussion (10–15 min)
- [ ] Solution exploration (10–15 min)
- [ ] Key moments / insights
- [ ] Closing / next steps (5 min)

PRODUCT DEMO

- [ ] Live demonstration of capability
- [ ] Explanation of how it works
- [ ] Customer reaction to demo

AUDIO CAPTURE

- [ ] High-quality audio from interviews
- [ ] Ambient sound from workshop
- [ ] Key quotes recorded separately

04 INFORMATION EXTRACTION

CUSTOMER PROBLEM (FROM FREUDENBERG)

- [ ] Current process for documentation
- [ ] How many people involved
- [ ] Time spent on documentation (hrs/week)
- [ ] Systems/tools currently used
- [ ] What breaks/goes wrong
- [ ] Business consequence of inaccurate docs
- [ ] Cost impact (if quantifiable)
- [ ] Risk impact (if quantifiable)

CUSTOMER QUOTES

- [ ] Direct quote about the problem
- [ ] Why it matters
- [ ] What they tried before
- [ ] About Conduct's approach
- [ ] About the solution direction

METRICS TO CAPTURE

- [ ] Current time spent on documentation
- [ ] Number of processes documented
- [ ] Number of people affected
- [ ] Frequency of documentation updates
- [ ] Error/rework rate (if available)
- [ ] Any other relevant metrics

05 CONDUCT INSIGHT

PRODUCT THINKING

- [ ] Why this problem matters
- [ ] Why existing solutions don't work
- [ ] How AI changes the approach
- [ ] What becomes possible with this capability
- [ ] How this fits into Conduct's mission

CUSTOMER COLLABORATION INSIGHT

- [ ] What Conduct learned from Freudenberg
- [ ] How customer input shaped the product
- [ ] What surprised the Conduct team
- [ ] Why this collaboration matters

06 CONTENT ASSETS TO CAPTURE

VISUAL ASSETS

- [ ] 50+ high-quality photographs
- [ ] 30+ minutes of raw video footage
- [ ] Edited highlights reel (3–5 min)
- [ ] Customer interview clips
- [ ] Product demo footage
- [ ] Whiteboards/notes (clearly captured)

WRITTEN ASSETS

- [ ] Full transcript (customer interviews)
- [ ] Full transcript (Conduct interviews)
- [ ] Workshop notes / key insights
- [ ] Customer quotes (with context)
- [ ] Metrics / results

07 APPROVAL CHECKLIST

Before publishing ANY content, confirm:

- [ ] Customer name/logo approval
- [ ] Individual names/titles approval
- [ ] Photographs approval
- [ ] Video approval
- [ ] Quotes approval
- [ ] Metrics/results approval
- [ ] Product claims approval
- [ ] Case study approval (if applicable)

08 STORY ELEMENTS TO IDENTIFY

THE PROBLEM

- [ ] What was Freudenberg struggling with?
- [ ] Why did it matter?
- [ ] Who was affected?
- [ ] What had they tried?

THE COLLABORATION

- [ ] How did we work together?
- [ ] What was the workshop like?
- [ ] What did we discover together?
- [ ] What surprised them?

THE INSIGHT

- [ ] What did Conduct learn?
- [ ] What did Freudenberg learn?
- [ ] What became clear?

THE SOLUTION

- [ ] What is the capability?
- [ ] How does it solve the problem?
- [ ] What becomes possible?

THE HUMAN ELEMENT

- [ ] Who are the key people?
- [ ] What's their perspective?
- [ ] How does this change their work?

METRICS & EVIDENCE

TO CAPTURE NOW

- [ ] Current state metrics (time, people, cost)
- [ ] Problem severity (quantified if possible)
- [ ] Customer expectations for improvement

TO TRACK LATER

- [ ] Time saved (post-implementation)
- [ ] Productivity gains
- [ ] Accuracy improvements
- [ ] Teamt satisfaction
- [ ] Adoption rate

09 DISTRIBUTION PLANNING

LINKEDIN CONTENT

- [ ] Announcement post (company)
- [ ] Founder post
- [ ] Customer problem post
- [ ] Collaboration post
- [ ] Product capability post
- [ ] Behind-the-scenes post

LONG-FORM CONTENT

- [ ] Substack article (deep dive on problem)
- [ ] Medium article (educational angle)
- [ ] Hero case study (full story)

VIDEO CONTENT

- [ ] Highlights reel (3–5 min)
- [ ] Customer interview clips
- [ ] Product demo
- [ ] Behind-the-scenes

SALES / RECRUITMENT

- [ ] Case study (for sales)
- [ ] Culture/collaboration story (for recruitment)
- [ ] Product asset (for demos)

THE GOAL

Capture the real story, show the real impact, and create assets that build trust, drive awareness, and accelerate growth across customers, prospects, and talent.
